Cardboard Bed

This bed made of cardboard was developed in collaboration with Ryohin Keikaku Co., Ltd. to improve conditions in evacuation centers. It can be assembled in limited spaces, and the cardboard box used for the product's packaging during shipping can be repurposed as storage boxes under the bed, helping minimize waste in the shared living space of evacuation centers.

Following the Noto Peninsula Earthquake on January 1, 2024, forty sets of cardboard beds from Ryohin Keikaku, and forty mattresses from by Airweave Inc. were donated to an evacuation center in Kanazawa.
