

Year: 2001

Location: Japan

Program: Museum

Paper Art Museum PAM B

For the 924 m² contemporary gallery, an existing structure was renovated. The structural frame was conserved as is, with all exterior facades being replaced with an overhead-shutter made of FRP inside out. When the shutter opens it slides outwards in the shape of cantilever creating a 5m deep canopy. The gallery continues into the garden landscape with various events performed beneath the canopy of the overhead-shutters.
