Papertainer Museum

A temporary art museum, constructed from, shipping containers (Container Gallery) and paper tubes (Paper Gallery). The surrounding forest and circular pass generated the shape of this temporary exhibition pavilion. The Container Gallery consists of two parallel 10m high structural walls composed of shipping containers; containers 3m in length, are piled in four stages and in a checkered pattern. The first row of containers is used as exhibition booths while the second row serves as office and storage spaces. The Paper Gallery is organized between two concentric semi-circular walls made of arrayed paper tube columns and a structural truss roof.
