

Year: 2011

Location: Italy, Japan

Program: Exhibition Design / Installation

Maison Hermès Pavilion

The concept of the pavilion was to create a nomadic exhibition structure easy to assemble and disassemble; all the structure is made of 4 different diameters of paper tubes and connected with wood standard panels to create the horizontal elements. This structure using standard prefab elements also permits to create many different shapes according to future site condition. In order to reduce the volumes for shipping, it is possible to nest the 4 different diameters of paper tubes.
