

Paper Arch for MOMA

Year: 2000

Location: United States

Program: Exhibition Design / Installation

Status: Completed

Type: Temporary

Structure: Paper Tube Structure

The Paper Arch is made entirely of paper tubes, spanning over the sculpture garden of the MoMA in New York, as a contribution to the experimental architecture exhibition. Unlike the Hannover Pavilion, the lateral spanning arches of this structure were able to be made of paper as well, resulting in a pure paper architecture.
