

# HANEKI FOREST ANNEX

Year: 2004

Location: Japan

Program: Residential

Status: Completed

Type: New-built

Structure:

In order to guarantee sufficient parking space at the ground level, the one story high steel frame structure of the annex is lifted up over the ground. The four entry stairs extend out to all directions, simultaneously acting as bracing. The annex's most prominent feature is its self-supporting arched roof made of a folded plate structure.
