Takatori Catholic Church chair

This chair is composed of three cutouts from a single plywood panel; the seat, front legs and backboard. One panel of 900mm x 1800mm can make three chairs. These chairs are stackable and with a separate piece cut out from the backboard, can be connected to form a bench with a slight curvature, that fits the round space in the church. There are notches cut in the backboard for hanging hand bags.
