

Paper Pavilion for Kew Gardens

Year: 2000

Location: United Kingdom

Program: Culture and Leisure

Status: Unbuilt

Type: New-built

Structure: Paper Tube Structure

For this conservation activity centre commissioned by the Royal Botanic Gardens, a lightweight, energy autonomous paper pavilion was designed in response to the sensitive, natural, and historical setting. Composed as a modular system of paper tube tree columns and branching paper tube space frame roof structures, the building read as a canopied paper forest within the gardens.
