

# World Trade Center Site Redevelopment

Year: 2003  
Location:  
Program: Mixed Use

Status: Competition  
Type: New-built  
Structure:

This project is based on the idea that New York should continue growing incrementally – as it always has – and on the notion that this is the time for public space to occupy the iconic value of the city skyline. The two towers are characterized by a triangular lattice structure wrapping upwards towards the memorial gardens at the crowns.
